

Tutorial No:4

Tutorial Title: Write a C++ program to divide a complex number by a scalar value.

Name of Student: Sarthak Sunil Joshi

Class:SY

Div:2

PRN NO: B25ET1134

Batch:C2

Program:

```
#include <iostream>
using namespace std;

int main()
{
    float real, imag, scalar;
    float resultReal, resultImag;

    // Input complex number
    cout << "Enter real part: ";
    cin >> real;

    cout << "Enter imaginary part: ";
    cin >> imag;

    // Input scalar
    cout << "Enter scalar value: ";
    cin >> scalar;

    // Divide both parts by scalar
    resultReal = real / scalar;
    resultImag = imag / scalar;

    // Display result
    cout << "Result = " << resultReal << " + "
        << resultImag << "i";

    return 0;
}
```

Output:

A screenshot of a console window with a dark background and a light gray title bar. The title bar contains five icons: a checkmark, a cursor, a window, a gear, and a clipboard. The console text is as follows:

```
Enter real part: 10
Enter imaginary part: 6
Enter scalar value: 2
Result = 5 + 3i

...Program finished with exit code 0
Press ENTER to exit console.
```

The last line is followed by a white cursor box.
